

# Danil MAKSIMOV

Full Stack Developer  
Brno, Czech Republic

Hi, my name is Danil Maksimov. I'm a Full Stack (Backend heavy) Developer from Russia, who presently lives in the Czech Republic. I am an ex-student of Information Technologies and a current self-learning Full Stack Developer. I have about 1 year of commercial experience and 2 years of total software development experience. I love Ruby and I prefer to work with non-rails lightweight technologies out of commerce.

Also I'm found on mentoring newcomers to software development by helping them to deal with difficulties in understanding of some stuff and building individual roadmaps.

## Hobbies

 Self projects development

 Researching Third-party technologies out of the Ruby world

 Video Games

 Sports a bit

## Experience

### Full Stack Developer

#### Disivo

since November 2020

In the beginning, I was developing the most requested features by clients including designing the inner structure, implementation of server and client sides with the followed refactoring of affected modules, and writing CI tests with followed manual testing.

I rapidly grew up from some junior grade tasks to middle-senior tasks. I started with some new task delivering and after 2 months I was moved to refactoring and optimization of the project with seniors engineers.

Elixir

## ♥ Contributions

### Private

Contributing to private self and friends repos. When I'm developing my own projects I'm trying to get rid of the Rails stack as I have enough of it at my job and also I'm implementing lightweight applications. I use some non-rails solutions - Sequel as ORM and Roda/Sinatra for routings.
