Overview

I am Fullstack Software Engineer from Russia. I believe that development is more about problem solving and coding is a background action, so programming language is just a tool to solve specific problems. I prefer to take hard tasks because they help me to improve my skills under pressure. I have some volunteer projects development experience, freelance experience and experience in development applications for automation various everyday tasks. Based on the knowledge of software engineering I acquired at the university, I write clean and reusable code which is easy to maintain. I am also familiar with life cycle of software, stages of software development, requirements analysis, requirements specification, and methods of software design. I am native Russian speaker, I have B2 level of English and B1 level of Czech. I eager to be a part of a professional team with interesting projects.

Skills

Languages:	Tools:	Technologies:
• Ruby	• Ruby on Rails, RSpec, dry-rb • ORM (ActiveRecord, Sequel)	• Object-Oriented Programming Design Patterns by GoF
• JavaScript	• HTML5, CSS3, Bootstrap • React, Redux, Axios	SOLID principles DRY, KISS, YAGNI, TDA principles
• C	• Git, Heroku • Linux	• Test-Driven Development (TDD) • Cloud Computing • REST, GraphQL

My mostly theoretical skills: CI/CD, Docker, Jenkins, Behavior-Driven Development

Experience

May 2019 - December 2019 Acquainted with basics of programming in the statically typed languages including C. Wrote several projects including university projects.

January 2020 - April 2020 Developed several applications on pure Ruby with wide-range functionality which solves and automates everyday tasks I face.

May 2020 - June 2020 Developed, scaled, and deployed multi-international telegram bot with high load (possibly 12k user requests per second). Managed to analyze business features even going beyond what was requested from the client

July 2020 - Present Maintaining and Refactoring previous projects. Worked on several projects where was designing API's as server side coupled with Component Based client side including such tools as Ruby on Rails (REST/ GraphQL API's), dry-rb, RSpec, React (functional approach), Redux.

Education

Brno University of Technology
Bc, Information Technology
2018 - 2021
